Entire Grant period

July 1, 1993 - June 30, 1996

2.0 OBJECTIVES:

The objective was to support US citizens in acquiring expertise for understanding microbiological mechanisms that determine the fate of environmental pollutants. This was an AASERT augmentation grant tied to Dr. E. L. Madsen's AFOSR Grant #AFOSR-91-0436 "Geochemical, Genetic, and Physiological Control of Pollutant Biodegradation" (project period 30 March 1992 - 29 March 1995). The individuals supported by the AASERT grant were guided in their graduate curricula to gain knowledge in biochemistry, genetics, toxicology, microbiology, and environmental engineering by E. L. Madsen, a member of Cornell University's Graduate Fields of Microbiology and Environmental Toxicology.

3.0 STATUS OF EFFORT

The effort has been completed. Both this AASERT grant and its accompanying project have expired. By providing educational and research opportunities for American citizens (see below) at Cornell University, the goals were achieved. The list of peer reviewed publications (see below) attests to successful accomplishment of technical goals. We have applied molecular, geochemical, and microbiological methodologies to gain an understanding of processes that govern the environmental fate of pollutant compounds in contaminated sites.

4.0 ACCOMPLISHMENTS/NEW FINDINGS

Criteria for documenting *in situ* microbial metabolism of environmental pollutants have been established, tested, and extended. These criteria and the supporting methodologies are important for efforts by the AF and society at large in eliminating environmental pollutants. Of key importance is the fact that the studies carried out and reported here address intrinsic bioremediation, which may be the most widespread and economically feasible microbiological clean-up technology for contaminated sites.

5.0 PERSONNEL SUPPORTED

TERSUNNEL SUPPUR	EXSURIEL SUPPORTED				
Associate Professor	Eugene L. Madsen				
Graduate Students	James B. Herrick	(Ph.D. January 1995, Microbiology; presently employed at Los Alamos National Laboratory)			
	Robert L. Sandoli	(MS June 1994, Microbiology; Presently employed at Earth Tech, Inc.)			
	Karen G. Stuart-Keil	(Ph.D. ≈ January 1998, Environmental Toxicology)			
	Mark S. Wilson	(Ph.D. ≈ June 1997, Microbiology)			
Undergraduate Assistant	Cynthia Mann	(presently enrolled in the toxicology graduate program at the University of North Carolina)
